 CENTRE  
 SECTOR - 18, BLOCK-E ROHINI  
 DELHI 110085

Name	: DUMMY	Collected	: 4/6/2021 11:18:00AM
Lab No.	: DUMMYZ168	Age: 25 Years	Gender: Male
		Received	: 4/6/2021 11:20:20AM
		Reported	: 5/6/2021 3:22:54PM
A/c Status	: P	Ref By	: DR. DUMMY DUMMY
		Report Status	: Final

Test Name	Results	Units	Bio. Ref. Interval
<b>LUPUS ANTICOAGULANT PANEL; LAC PANEL</b> (Electromechanical & Photooptical Clot Detection)			
<b>APTT</b>			
Patient Value	<20.00	sec	23.70 - 33.00
Control Value	28.40	sec	
PTT-LA	2.00	sec	31.30 - 44.10
<b>LUPUS ANTICOAGULANT BY DRVVT</b>			
<b>SCREEN</b>			
Patient Value	2.00	sec	30.8 - 43.6
Control Value	12.00	sec	
Screen Ratio	2.00		<1.20
<b>MIXING STUDIES</b>			
Patient Plasma : PNP (1:1) Mix Value	1.00	sec	32.00 - 42.00
Control Value	12.00	sec	
Mix Ratio	1.00	sec	<1.20
INTERPRETATION	No lupus like anticoagulant present		

- Note:**
1. As per ISTH guidelines Lupus Anticoagulant detection must be done by using at least two clot based assays employing separate clotting principles like PTT-LA & DRVVT.
  2. Results to be interpreted in conjunction with the patient's medical history, clinical presentation and other laboratory tests.
  3. Test conducted on Citrated plasma.

Comments			

The Dilute Russell Viper Venom time (DRVVT) is a sensitive method for determining the presence of a Lupus Anticoagulant and/or presence of a phospholipid antibody. DRVVT uses a dilute concentration of phospholipids which facilitates LA antibody detection. This assay is most robust & specific because it is not influenced by deficiencies of intrinsic pathway or antibodies to factors VIII,IX or XI. A positive test result indicates presence of Lupus anticoagulant which may be associated with arterial or venous thrombosis.

Lupus anticoagulants are associated with SLE, thrombocytopenia, recurrent spontaneous abortions & thromboembolic disease states. Abnormal PTT-LA tests have been reported in 2-15% of apparently asymptomatic general population with many of these antibodies being transitory. Persistent LAs are associated with an approximate 30% risk of developing symptoms characteristic of Antiphospholipid syndrome.
